## Product List

**Ridomast**..... Mastitis Prevention And Treatment Program

**Bovi BLI** ..... Bvd, Leptospirosis & Ibr 3-in-1

**Bovi BLS**...Bvd, Leptospirosis & Salmonella 3-IN-1

**Ridoscour**.....Scour Treatment And Prevention

**Superstrde+**.. Slow-release Minerals, Vitamins And Trace Elements.

**Supercrop**..... Seaweed Based Fertilizer

**Hoof Klenz**..... Hoof Health Program

**Air Klenz**.... Organic Disinfectant

**AceTrace**.... Nutritional Range

## About Us

Established in 1989, GH AGRI is an Agricultural Veterinary Healthcare Company providing safe and effective immunisation Programmes for the prevention and treatment of a range of on-farm disease and ailments including Mastitis, BVD, Leptospirosis, IBR, Salmonella, and Parasites.

GH AGRI is the only Homoeopathic Veterinary Healthcare company licensed to manufacture, Wholesale and retail in Ireland. Fully licensed by the Department of Agriculture since 1989, GH AGRI is also fully accredited by The Health Products Regulatory Authority (HPRA)

## Our Company

Managing Director of GH AGRI, Kevin McHugh has a long and established background in the business of farming and developed an interest in Veterinary Homeopathy while working in the UK in the 1980's. Kevin experienced first-hand the amazing results of using homeopathic veterinary products to prevent and control common farm diseases.

Kevin and his team researched and developed a range of Homeopathic Veterinary Products in conjunction with NUI Galway, the UK Homeopathic Veterinary Association and several UK and Irish Veterinary Homeopaths. This collaboration led to the launch of a range of innovative Homeopathic Veterinary Products. Since the first products were launched we have continued to research, develop and increase our product range, The Company was Rebranded in 2012 from Galway Homoeopathics to GH Agri. Each GH Agri Program combines a unique product combined with an individualised dosage schedule which will target each individual problem

### **GH Agri Mastitis Prevention And Treatment Somatic Cell Count Program**

Mastitis means 'inflammation of the udder', and is usually caused by a bacterial infection. This inflammation is regarded as the most economically significant infectious disease in dairy cattle. Our product Ridomast has been used on farms across Ireland and the UK since 1989. Ridomast has been used for the prevention and treatment of Mastitis and HSCC. One of the key benefits of our Ridomast program is that there are no meat and milk withdrawal periods, which this saves our customers money. Ridomast is also easy to use as the product goes into the animal's drinking water, this saves our customers time. It is less stressful on the farmer trying to catch animals and it is less stressful on the animals as it is none invasive.

With our Ridomast product, you receive a full 12-month backup program, where we work to try and get you into bonus milk and help keep you there. We have nearly 30 year's experience on Irish and UK farms with over 20,000 customers using our Ridomast program during that time. Year after year, farmers keep coming back to the Ridomast program.

- **Reducing and stabilising Somatic Cell counts.**
- **Treating and preventing Mastitis**
- **Additional immunity benefits for cows and unborn calves.**

## **BVD/Leptospirosis/IBR/Salmonella**

### **BVD, LEPTOSPIROSIS & IBR 3-IN-1 HERD HEALTH IMMUNISATION PROGRAM**

The Programme provides a disease specific herd immunisation boost which will promote BVD Free Status in addition to tackling Leptospirosis and Infectious Bovine Rhinotracheitis – IBR or Salmonella.

**Our best selling 3-in-1 Programmes provide tangible and fast-acting results**

**Bovine Viral Diarrhoea (BVD)** is a highly contagious *viral disease* of cattle that can be transmitted as easily as the common cold. It can be spread directly by infected animals, or indirectly; for example, via slurry and contaminated visitors or equipment. Most infections with BVD are Transient Infections with no obvious clinical signs.

**Bovine Leptospirosis** is a highly infectious bacterial disease with over 70% of Irish and UK dairy herds and 80% of beef herds infected. The disease can easily spread and is dangerous to humans. It is spread mainly by infected cattle but can also be spread by other infected carriers such as sheep and rodents. Bought in animals such as breeding bulls and replacement heifers may appear perfectly healthy but may introduce the disease to a herd.

**Infectious Bovine Rhinotracheitis – IBR** remains a common cause of respiratory disease in cattle in Ireland and across world; it is likely that the disease is now endemic in most international herds.

Once an animal has become infected, it remains infected for life, despite the development of an effective immune response. All ages of animals are potentially at risk.

## **BVD/Leptospirosis/IBR/Salmonella**

**Bovine Salmonella** is caused by many species of bacterial salmonellae causing a wide range of symptoms in cattle, including, severe diarrhoea and milk drop. Death occurs in around 75% of affected animals if not treated.

Although preventing the introduction of disease is the ultimate goal, increasing the immunity of your herd at the beginning of the breeding season will limit the effects of any outbreak and maintain herd health and productivity.

Using a GH Agri BVD 3-in-1 Immunisation Programme will prevent a PI foetus in pregnant animals, increase general health and immunity. Part of any effective **BVD Eradication Program**.

# ***RIDOSCOUR***

## **SCOUR TREATMENT AND PREVENTION**

<https://www.facebook.com/GHAGRI.ACETRACE>  
WWW.GHAGRI.COM

## SCOUR TREATMENT AND PREVENTION

### PREVENTION PROGRAMME - EFFECTIVE

For bacterial and viral scours/ Diarrhoea (calf scour) In severe cases of calf scour, dehydration and electrolyte loss lead to a number of other damaging effects such as a reduction in blood circulation, acidosis, impaired kidney function, and death.

**Directions for use:** Prevention: 5ml directly onto animals tongue immediately after birth and repeat on day 3. Treatment: 5ml three times daily for 3 days

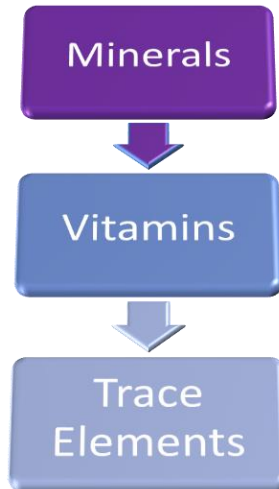

# SUPERSTRIDE+

CHELATED

Slow Release

Over 6 months

# SUPERSTRIDE+

## CHELATED

*Proper Mineral and Vitamin nutrition contributes to strong immune systems, reproductive performance, and calf weight gain. Diets with mineral imbalances may cause poor animal performance, resulting in reduced profitability.*

### Superstride + Directions

**Superstride+** can be given using a dosing gun or be poured onto dry feed as well as poured into drinking water. For optimum results **Superstride+** should be given once every 6 months.

COW	CALF	HORSE	SHEEP	LAMB
60ml	15ml	50ml	20ml	10ml

# SUPERSTRIDE+

## CHELATED

Slow Release  
Over 6 months

### Superstride + Vitamins and Minerals

Try our specially formulated combination of slow-release minerals, vitamins and trace elements.

Customers who use our **Superstride+** also see an increase in animal appetite, weight gains, milk production and milk fat %. Also an increased general health and immunity as well as faster recovery times.

100% natural **Super Stride+** Vitamins and Minerals compliments other program's within our product range

# SuperCrop

The Vitality of the Sea

## Seaweed Based Fertilizer

<https://www.facebook.com/GHAGRI.ACETRACE>  
WWW.GHAGRI.COM

## Seaweed Based Fertilizer

A scientifically proven seaweed base fertilizer formulated with minerals, vitamins and essential trace elements. Seaweed Fertilizer is 100% natural and regular use will result in healthier soil/soil structure and improved soil condition, as well as more worms thriving in the soil.

Our formula can be applied directly as a foliar feed, through the irrigation system, or as a slurry additive. Seaweed Based Fertilizer is much more kinder to soil and the ecosystem than other fertilizers

**Supercrop** allows earthworms and bacteria do their job to breakdown organic matter which provides extra nutrients at the roots.

**Supercrop** is suitable for organic farmers and growers, as well as conventional farming . Seaweed fertilizers improve the retention of water in dry and coarse soils.

Seaweed extracts are already delivering improved agricultural productivity for their ability to improve soil nutrition and structure

## Seaweed Based Fertilizer

### What are the benefits of Super-crop Liquid?

#### Nutritionally

- Thicker and tiller grass
- Less sod-pull as root thickness is greater
- More root production
- Much more palatable grass in biologically active soils with good aeration
- Neutral pH. levels and healthy active soil thus rising of the root system does not happen.
- Also, because of the low sod pull risk, you are left with a healthier more active stress resistant plant (much more bacteria i.e. more worms)
- Decreased susceptibility to drought or flooding
- Less topping required
- Much tighter grazing

## Seaweed Based Fertilizer

**Super-crop** Liquid slurry additive liquid fertilizer with minerals, vitamins and trace elements.

This product is based on blends of extracts from seaweed and lichen and contains homoeopathic properties and elements to help increase plant growth, resistance to disease and climate change stress. Thus promoting good plant growth and higher yields.

Easy application; 1 litre to 25,000 litres slurry at agitation.

**Super-crop** Liquid is a patented product and is also registered as a fertilizer with the Department of Agriculture Plant Health Division

**Super-crop** Liquid acts as a soil conditioner to unlock the available trace elements in grass.

# HOOF KLENZ

Organic Acid Based

## HOOF KLENZ

### HOOF KLENZ – HOOF HEALTH PROGRAM

An integral part of any healthy animal foot management program, Hoof Klenz (Hoof Cleaner) is a gentle but effective organically produced Foot Bath. A 100% natural solution which will cleanse, prime and ensure optimum hoof health and condition, and thus improving animal health in all cloven-hoofed animals.

**Hoof Klenz** (Hoof Cleaner) is diluted at different rates depending on the target species.

#### Directions for use:

**Cattle:** Use at a rate of 50:1, e.g., 100 litres of water to two litres of **Hoofklenz** . Walk animals through for first 3 consecutive days, repeating on a 14-day cycle. Top-up bath @ 1% from fresh, when soiled at 50:1. On problem hooves spray at 5:1, e.g., cows with ulcers and sore feet at paring.

**Sheep / Goats:** Walk sheep or goats through a 50:1 solution on a regular basis. On problem hooves use a hand sprayer and apply at rate of 5:1

**Pigs:** **Hoof Klenz** can be used by walking pigs through 50:1 solution every 2 or 3 weeks.

#### Good foot-management

**Point 1.** Ensure bath is kept reasonably clean of soiled material.

**Point 2.** Ensure there is sufficient depth of solution in bath to cover effected regions i.e., 1- or 2-inches above hooves .

**Point 3.** **Hoof Klenz** is not the total solution to feet and foot problems. regular paring will also benefit good foot management.

# AIR KLENZ

*Organic Acid Based*

## AIR KLENZ

Organic Acid based pH Cleanser and Air Purifier

100% Biodegradable

Air Klenz is a unique scientifically formulated cleanser. It is an organic acid solution to cleanse sheds and reduce and regulate pH levels.

Air Klenz has been formulated as a stabilizer and purifier, to be sprayed or fogged in areas where animals are housed.

Kills gram positive and negative bacteria as well as fungus. AirKlenz is a safe biodegradable, natural product. Intensively housed livestock are prone to many problems which can damage health and reduce profitability.

Air Klenz should be used as part of an on farm bio-security programme.

# AIR KLENZ

Organic Acid Based

GHAGRI  
Animal Healthcare

## AIR KLENZ

**Air Klenz** (Shed Cleanser) leaves no toxic residues, is fully biodegradable and is safe and effective to use.

This testimonial we received from one of our customers in the UK during the foot and mouth outbreak.

*“We first began using Air Klenz during the F&M outbreak and managed to avoid any farmyard contamination whatsoever even though we were in a high risk area, it works and its safe for me to use, no harsh chemicals”*

GH AGRI MD Kevin McHugh has a lifetime of experience in the business of farming and believes **“the farm as a fortress”** approach to protecting against disease and infection.

*“Many diseases and infections can be prevented by an aggressive bio-security plan, which I encourage every customer to consider. Some farmers still associate cleansing measures with the foot and mouth outbreak, but cross-contamination remains the biggest risk to farms and you cannot be too careful. GH AGRI is in the business of disease prevention and treatment but with good planning and control on-farm problems can be kept to a minimum.”*

### Some Tips for Biosecurity.

- New animals bought from the mart and bulls brought in should be checked and certified disease-free and even then isolated from your herd until you are confident they are in full health.
- Strong and secure fencing will protect against foxes and badgers which spread disease and infections from neighbouring animals, also keep herds from accessing infected water supplies.
- Regular yard cleaning and maintenance will reduce rodents and eliminate disease causing bacteria and viruses.
